

Environmental Policy

We are committed to the care of the environment, prevention of pollution and the efficient use of natural resources. This is not just a statement but is a commitment throughout our organisation.

We actively seek to:

- Maximise energy efficiency throughout our operation and with our customers
- Continually review best available technology in the provision and hire of equipment, and ensure that wherever possible customers have access to modern, energy-efficient machines
- Minimise waste production and recycle waste wherever possible
- Identify, quantify, and continually improve the environmental impact of the Company using improvement programmes, demonstrated by measures and targets which are under continual review
- Work with our customers to achieve the same objectives in their organisation

To prove our commitment, we have implemented management systems in line with the requirements of ISO14001: 2004.

As a minimum, we will comply with all relevant legislation, customer or other identified requirements.

This policy is published via the website, is available on request and is communicated to all employees.

The systems defined have our full and active support. They are under continual review and improvement, however once defined are mandatory for all team members.
